

End-to-End Test Evidence

Code review, remediation, validation and full end-to-end test of all 21 modules, including the Vedh DC / Noviq lead-to-order transaction

Item	Detail
Document	Test evidence and execution report
System under test	Cirra CRM, branch claude/sleepy-knuth-muo72h (base commit fedf098 plus the review fixes in this report)
Environment	Docker Compose: Postgres 16 + pgvector, Redis 7, FastAPI API, Celery worker + beat, Next.js web, Ollama (local LLM)
Browser	Microsoft Edge (Chromium) via Playwright, headless, 1440x950 and 390x844 (phone)
Test date	27 September 2026
Prepared by	Claude (acting as test lead), for Sid Choudhury
Overall result	500 of 500 checks passed - 0 open defects

1. Executive summary

Every component of Cirra was tested end to end across four independent layers. **All 500 checks passed.** Before testing, two expert code reviews covered the whole codebase and raised 20 findings; all were fixed, each with a regression test. The new tests uncovered 2 further defects in report SQL, which were also fixed. The Vedh DC / Noviq transaction was executed in the browser from web-form lead to an ERP-acknowledged sales order.

Test layer	What it proves	Checks	Passed	Result
1. Automated backend suite (pytest)	Business rules, calculations, permissions and every API across all modules	132	132	PASS
2. Live API functional test	All 21 modules against the running stack; every read endpoint for 9 roles; Celery-delivered signed webhook	38	38	PASS
3. Browser sweep (Edge)	Every screen and Admin tab for 8 roles, new-module UI journeys, phone layout	268	268	PASS
4. Noviq transaction (Edge)	Lead -> opportunity -> quote -> approvals -> e-signature -> Closed-Won -> order -> ERP	62	62	PASS
Total		500	500	PASS

Verdict: fit for enterprise pilot use in a private-cloud deployment. The residual items in section 9 are enhancements, not defects.

Test data volume at execution

Tests ran against the demo workspace plus a generated volume batch (python -m app.demo_volume): about 70 accounts, 260 contacts, 130 leads, 140 opportunities across five pipelines, 900 activities, 70 cases, 45 quotes, 60 documents, contracts, invoices, campaigns, partner registrations, forecasts and quotas.

2. Scope, approach and roles

Four layers, each independent of the others, so a defect has to get past all of them to reach a user:

- **Automated suite** - in-process API tests with a fresh migrated and seeded database per run.
- **Live API functional test** - HTTP against the running containers with real Postgres, Redis and the Celery worker; includes a permission sweep of every read endpoint for every role and a webhook delivered by the scheduled worker to a listener that verifies the HMAC signature.
- **Browser sweep** - signs in as each role, opens every navigation page and one record of each list, clicks every Admin tab and fails on crash screens, console errors, API 5xx, calls the role may not make, or sideways scrolling.
- **Business transaction** - the Noviq lead-to-order journey through the UI, with evidence screenshots at each checkpoint.

Role	Login	Used for
Super Admin	admin@cirra.demo / sid.choudhury@cirra.demo	Configuration, security, API keys, webhooks, jobs
Sales Manager	marcus@cirra.demo	Approvals level 1, stage-gate overrides, quotas, team forecast, Noviq owner
Account Executive	priya@cirra.demo, diego@cirra.demo	Own-scope selling; row-level isolation checks
SDR	sam@cirra.demo	Lead work; no quotes
Deal Desk approver	dana@cirra.demo	Approvals level 2 (Noviq quote)
Support Agent	sofia@cirra.demo	Cases, knowledge base, CSAT
Marketing	nina@cirra.demo	Campaigns, list building, campaign email
Auditor	viewer@cirra.demo	Read and export only; audit trail
Partner (external)	partner@northstar-partners.com	Partner portal only

3. Code review and remediation

Two reviews by a senior developer/architect reviewer (automated multi-angle review at high effort) covered the five earlier phases and the latest commit. Every finding was verified against the code, fixed, and given a regression test that fails without the fix. Validation after remediation: automated suite 132/132.

Findings by severity: 3 critical, 5 high, 11 medium, 3 low - all fixed.

ID	Severity	Area	Finding	Fix	Regression test	Status
CR-01	Critical	SSO (identity.py)	SSO linked an IdP identity to any existing user, super_admin included, by an unverified email or UPN, bypassing local 2FA.	Link to an existing user only with a verified 'email' claim or an admin-trusted domain; usernames/UPNs alone are refused.	test_sso_links_existing_accounts_only_on_proof_of_email	Fixed
CR-02	Critical	2FA sign-in (auth.py)	No attempt limit on /auth/mfa/verify: the 6-digit code could be brute-forced with a stolen password.	Lockout after 5 failed codes in 15 minutes (counted from the audit trail); password sign-in also locks after 10 failures.	test_second_factor_and_password_guessing_lock_out	Fixed
CR-03	Critical	Admin API (admin.py)	An API key acting as an admin could change sign-in security, users, passwords and permissions.	New authorize_person() guard refuses API keys on identity, access-control and key-management endpoints.	test_admin_api_keys_cannot_manage_identity_or_access	Fixed
CR-04	High	Campaigns (campaigns.py)	Campaign detail listed influenced deals (titles, amounts) outside an AE's row-level scope.	Itemised deal list filtered by the viewer's scope; campaign totals unchanged.	test_campaign_detail_follows_row_scope	Fixed
CR-05	High	Webhooks (developer.py)	Cursor advanced past sequence ids whose transactions committed late, so some events were never delivered.	Cursor only moves past settled events (5 min); newer ones are rescanned; unique key prevents duplicates.	test_webhook_fan_out_sees_late_commits_and_never_duplicates	Fixed
CR-06	High	Webhooks (developer.py)	Overlapping runs (beat, Deliver now, Jobs) could create and send duplicate deliveries.	Transaction-scoped Postgres advisory lock: a second concurrent run skips; inserts ON CONFLICT DO NOTHING.	test_concurrent_webhook_runs_skip_instead_of_double_sending	Fixed
CR-07	High	Workflows (workflows.py)	Scheduled rules re-read the same first 200 matches forever; records beyond the batch were never processed.	Already-run records excluded in the query, stable ordering; each run reaches new records.	test_scheduled_rules_reach_matches_beyond_one_batch	Fixed
CR-08	Medium	SSO redirect (identity.py)	return_to accepted '\evil.com', an open redirect after sign-in.	safe_return_path(): same-site paths only; backslashes, schemes, hosts and control characters rejected.	test_return_path_rejects_off_site_forms	Fixed
CR-09	Medium	Workflows (workflows.py)	One rule whose commit failed left the session broken, silently skipping all later rules.	Each rule runs in its own try / commit / rollback; failures are logged.	test_one_failing_rule_does_not_skip_the_others	Fixed
CR-10	Medium	Workflows (workflows.py)	update_field on cases bypassed the case service: priority changes didn't re-time SLAs, reassignments didn't notify.	Case fields updated through cases.update().	test_case_priority_rule_retimes_sla_and_events_use_entity_names	Fixed
CR-11	Medium	Campaign email (campaigns.py)	A mid-run SMTP failure rolled back 'sent' for people already emailed, so a retry emailed them twice.	Each message is committed as soon as it is sent; refused recipients are marked bounced.	test_campaign_send_keeps_progress_when_smtp_fails	Fixed
CR-12	Medium	Campaign email (campaigns.py)	Names containing backslashes broke rendering (regex replacement escapes).	Values inserted literally with a function replacement.	test_render_inserts_values_literally_and_preview_link_is_inert	Fixed
CR-13	Medium	Campaign preview (campaigns.py)	The preview showed a real member's working unsubscribe link.	Preview renders an inert placeholder link.	test_render_inserts_values_literally_and_preview_link_is_inert	Fixed

ID	Severity	Area	Finding	Fix	Regression test	Status
CR-14	Medium	Lead capture (leads.py)	A returning lead's new campaign was never credited (first-touch value kept).	Capture credits the campaign named by this capture.	test_returning_lead_is_credited_to_the_new_campaign	Fixed
CR-15	Medium	Accounts (accounts.py / performance.py)	Territory lookup autoflushed a pending account: a duplicate domain gave 500 instead of 409.	assign() runs without autoflush; the insert error surfaces in the caller's own flush.	test_duplicate_account_domain_is_409_not_500	Fixed
CR-16	Medium	Users (admin.py)	An admin password reset didn't end existing sessions.	Password reset bumps session_version, revoking every outstanding token.	test_password_reset_ends_existing_sessions	Fixed
CR-17	Medium	Auth (auth.py)	A stale bearer token blocked forced 2FA enrolment during sign-in.	Optional-session dependency treats an invalid bearer as no session.	test_stale_bearer_does_not_block_forced_enrolment	Fixed
CR-18	Low	Cases API (cases.py)	PATCH with null status/priority/subject/channel returned 500.	Clearing a required field returns 422.	test_case_patch_rejects_clearing_required_fields	Fixed
CR-19	Low	Workflows (workflows.py)	emit_event used 'activite' as the entity type.	Explicit entity-type map (activity, case, deal ...).	test_case_priority_rule_retimes_sla_and_events_use_entity_names	Fixed
CR-20	Low	Territories (performance.py)	Realignment loaded every account with relationships; imports re-queried territories per row.	Column-only read, one UPDATE per territory; territories loaded once per import.	test_territories_realignment_new_accounts_and_reports	Fixed
NEW-21	High	Reports (reporting.py)	Found by the new sweep test: Cases 'first response / resolution hours' used round(double, int), which Postgres lacks - those report fields and every workflow on cases failed.	Cast to numeric before rounding.	test_every_report_field_of_every_source_runs	Fixed
NEW-22	Medium	Reports (reporting.py)	Same defect in Activities 'Duration (min)'.	Cast to numeric before rounding.	test_every_report_field_of_every_source_runs	Fixed

4. Business transaction: Vedh DC / Noviq, lead to order

Executed in Microsoft Edge by the Sales Manager (Marcus Vance) with Deal Desk (Dana Whitfield) approving level 2. Vedh DC was entered as a German prospect so the run also exercises EMEA routing, GDPR consent and the EUR regional price book.

Records created

Object	Record	Result
Lead	Vedh DC - vedh.dc@noviq-demo.com	Captured from the public web form, scored 62 (MQL), BANT 4/4, converted
Account	Noviq (noviq-demo.com)	Created on conversion; territory EMEA; lifecycle customer
Contacts	Vedh DC (Economic Buyer), Jonas DC (Champion), Mia DC (Evaluator), Felix DC (Legal Counsel)	Buying committee mapped
Opportunity	Noviq: Revenue platform	Enterprise Solution Sale; all stage gates; Closed-Won EUR 91,980
Quote	Q-2026-0044	EUR, EMEA price book + LAUNCH-AI promotion; approved by Sales Manager then Deal Desk; locked
Documents	MSA (redlined to v2), Order Form	Order Form e-signed by customer then company (fully executed)
Order	ORD-2026-0004	Raised automatically at Closed-Won; acknowledged by the ERP as sales order SO-45438461
Contract	CT-2026-0039	Active 27 Sep 2026 - 26 Sep 2027, ACV EUR 91,980
Onboarding	Noviq onboarding: Noviq: Revenue platform	Provisioned with milestones; go-live target 26 Nov 2026

Step-by-step execution

#	Journey	Step	Result	Detail
1	1. Lead capture (public web form)	Hosted form loads for a valid key	PASS	
2	1. Lead capture (public web form)	Invalid key shows a friendly error	PASS	
3	1. Lead capture (public web form)	Prospect submits the form with consent	PASS

Screenshot evidence

The screenshot shows a web form titled "Website demo form" on the Cirra CRM website. The form contains the following fields and content:

- Website:** A label above the form.
- First name:** Input field with "Vedh".
- Last name:** Input field with "DC".
- Work email:** Input field with "vedh.dc@noviq-demo.com".
- Company:** Input field with "Noviq".
- Job title:** Input field with "VP Operations".
- Phone:** Input field (empty).
- Country:** Input field with "Germany".
- Employees:** Input field with "1200".
- How can we help?:** Text area with "Need CPQ integrated with SAP".
- Consent:** A checked checkbox with the text "I agree to receive product updates by email. I can unsubscribe at any time."
- Submit:** A dark green button with the text "Submit".
- Privacy:** A small checkbox with the text "Your details are processed under our privacy notice (GDPR / CCPA)".

E01 (TC-03) - Prospect completes the hosted web form with email consent

The screenshot shows a confirmation message on the Cirra CRM website. The message is displayed in a white box with a green checkmark icon and the text:

Thank you
Someone from our team will be in touch shortly.

E02 (TC-03) - Submission confirmed to the prospect

PASS hierarchy roll-up and duplicate suggestions
child appears in roll-up

Evidence: Account 360: firmographics, territory, hierarchy, health, deals

5.3 Contact & Relationship Management (P0)

PASS create contact with buying role; consent ledger; relationship strength
consent recorded

PASS right to erasure crypto-shreds a contact
PII removed

The screenshot shows the 'Akira Andersen' contact profile in the Cirra CRM. The left sidebar contains navigation links for Home, Leads, Pipeline, Accounts, Contacts, Tasks, Ask Aiden, and various modules under REVENUE, MARKETING, and CUSTOMERS. The main content area displays the contact's profile, including email, direct phone, mobile, time zone, and department. It also shows relationship strength metrics, privacy and consent settings, and engagement history.

Profile

Email: akira.andersen.0@keystone-retail-group-v1.example
Direct phone: +1 555 455 8683
Mobile: —
Time zone: Sun 9:35 PM local (Asia/Singapore)
Department: Operations

Relationship strength

40% reply latency - 30% inbound frequency - 30% meeting attendance
0/100
Median reply time: no two-way email yet
Inbound touches (30 days): 0
Meetings attended / missed: 0 / 1

Custom fields

Preferred language: —

Engagement

Meeting - Diego Alvarez - 2mo ago
QBR with the sales team.

Privacy & consent

No consent recorded
Regime: —
Email consent: Granted
Lawful basis: Consent
Channel opt-outs: Email, Phone, Sms, Do not sell / share (CCPA)
Erase personal data

Consent history

Append-only
No records

Evidence: Contact profile: buying role, relationship strength, consent

5.4 Lead Management (P0)

PASS web-form intake with key, dedup merge, scoring and routing
score=35 fit=50 owner=Priya Raman

PASS qualification (BANT), conversion to account + contact + opportunity
created {'account': False, 'contact': True, 'deal': True}

PASS disqualify requires a reason; SDR sees only own leads
22 leads visible to SDR

The screenshot shows the 'Hugo Quintero' lead workspace in the Cirra CRM. The left sidebar is the same as the previous screenshot. The main content area displays the lead's profile, including company, industry, country, and email consent. It also shows lead score, engagement metrics, BANT qualification, and engagement timeline.

Lead score

50% fit + 50% engagement - MQL at 60
Fit to ICP - 100
Engagement (30-day half-life) - 56
Size: 12,000 (+25)
Revenue: 1,800,000,000 (+20)
Industry: Food & Beverage (+30)
Geography: EMEA (+15)
Seniority: Chief Revenue Officer (+10)

Profile

Company: Granite Farms West
Domain: granite-farms-west-45...

Evidence: Unified account view as seen by the Marketing role

5.17 Workflow / Automation (P0)

PASS rule validation, test run preview, created-trigger fires after commit and logs a run
1 run(s), last status done

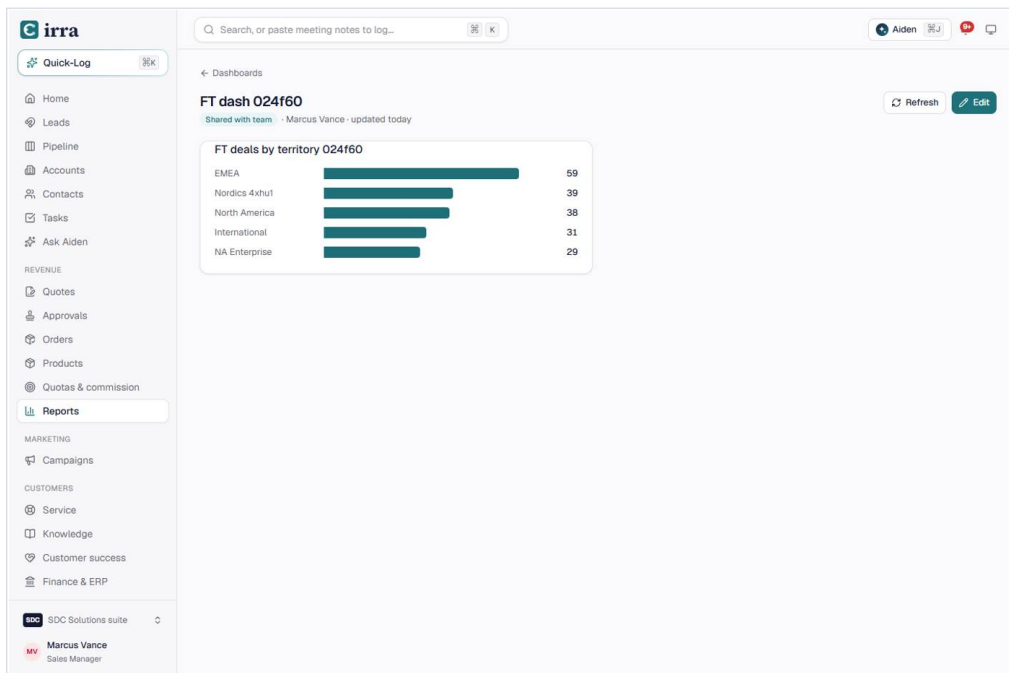

Evidence: Admin > Workflows: rules, triggers, run counts, templates

5.18 Analytics / BI / Reporting (P0)

PASS report builder over every source, save + share, dashboard, CSV export, win/loss

10 sources ran (deals, accounts, contacts, leads, activities, tasks, quotes, orders, cases, campaigns); shared report runs under the AE's scope (5 rows)

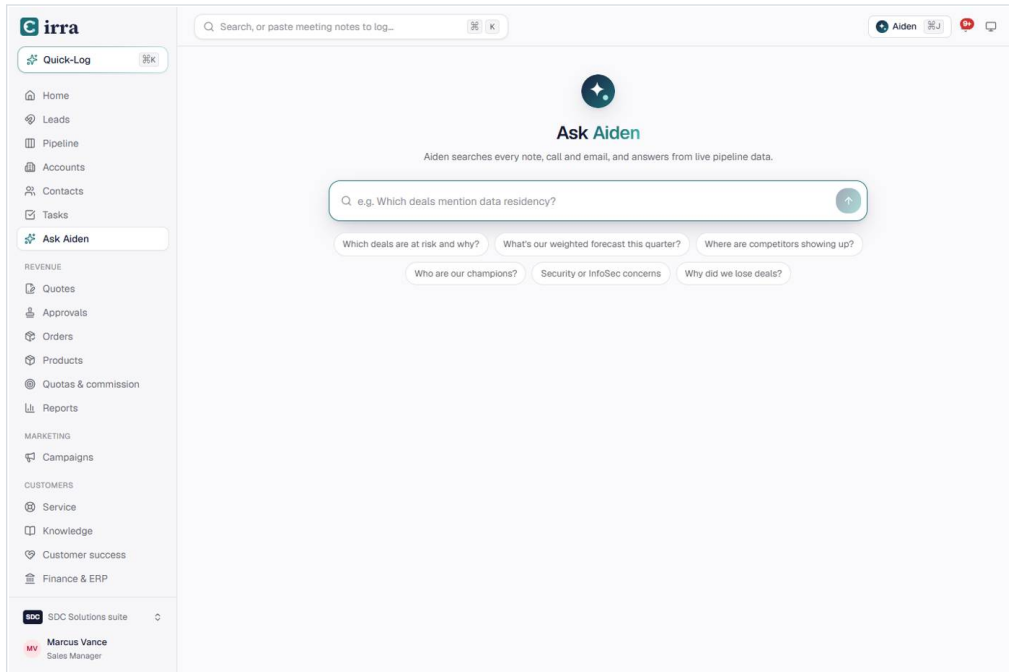

Evidence: Shared dashboard built from saved reports

5.19 AI / Agentic CRM (P0/P1)

PASS briefing, ask (hybrid RAG), account brief, email draft, risk scan

briefing headline: Today: 8 action items due, 4 deals at risk, 5 closing within; answer chars=480; scan={ 'opened': 3, 'resolved': 0, 'deals_scanned': 148 }; alerts=47

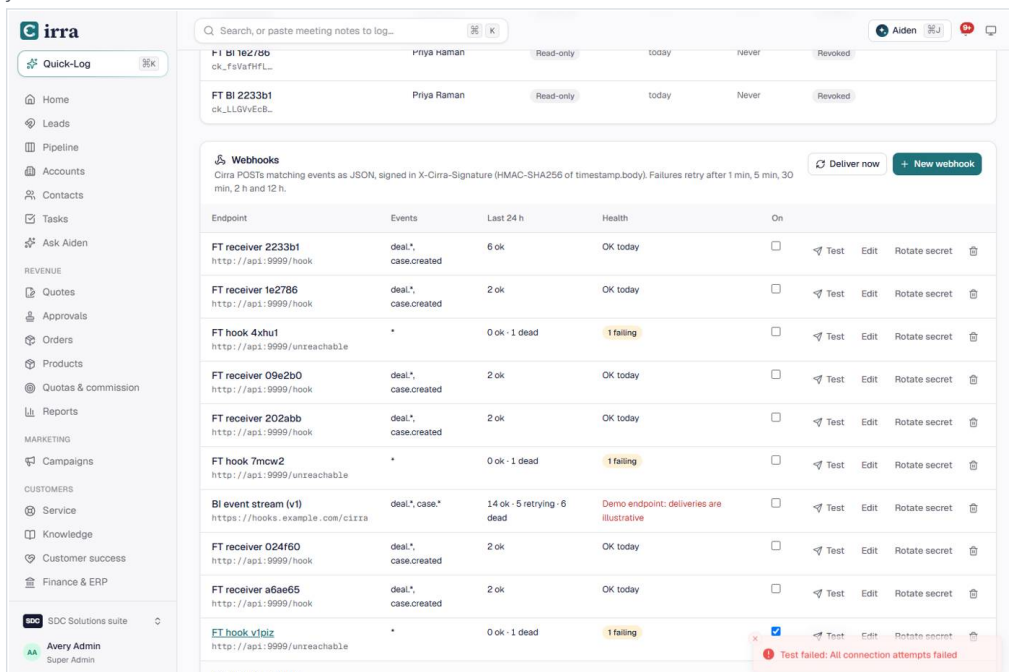

Evidence: Ask Aiden: hybrid retrieval over CRM facts and notes

5.20 Integration / API / Event Platform (P0)

PASS API key: read-only enforcement, scope as its user, revocation
key acted as Priya over 103 deals, then revoked

PASS webhook delivered by the Celery beat worker, HMAC-signed, pattern-filtered
delivered by worker in 20s, signature valid; event types seen ['deal.created']; log rows 2

PASS outbox event feed advances its cursor per target; ERP sync runs
feed ok, ERP sync succeeded via demo

Evidence: Admin > API & webhooks: signed webhook with delivery log

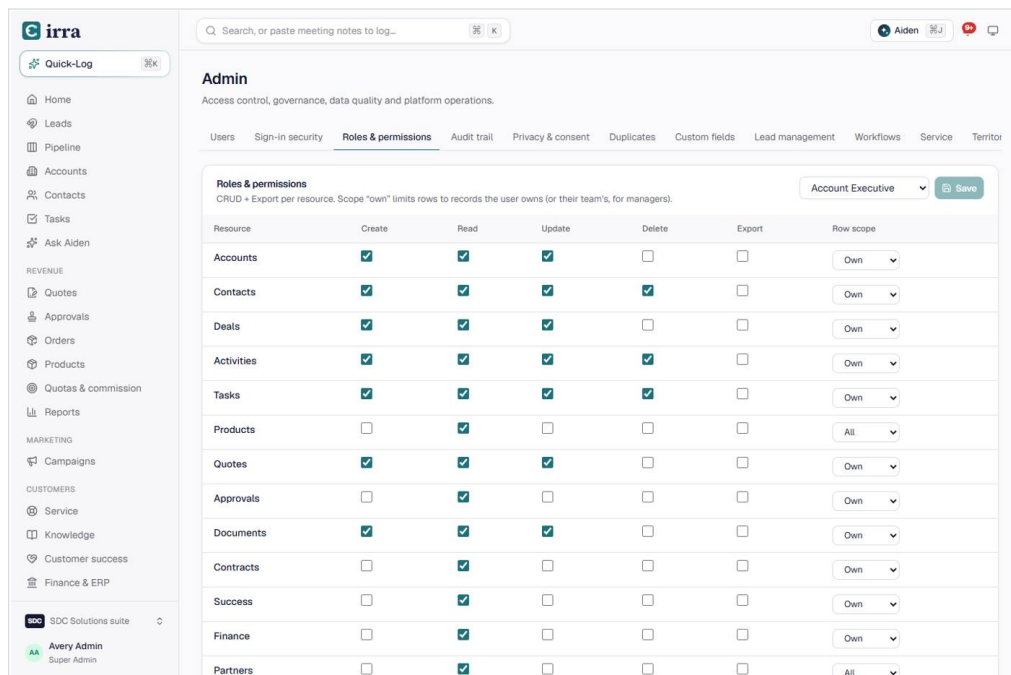

5.21 Administration / Security / Governance (P0)

PASS RBAC matrix editable by admin only; audit trail is append-only
8 roles in matrix; auditor sees 100 audit rows; tamper rejected: RuntimeError

PASS two-factor enrolment and sign-in with TOTP; admin reset signs the user out
enrol -> 2-step sign-in -> reset revoked the session

PASS export is audited; import preview auto-maps and validates
export 72 lines; import preview mapping={'Company Name': 'name', 'Website': 'domain', 'Industry': 'industry'}, errors=1

PASS every background job runs on demand without errors
13 jobs ok

The screenshot displays the Cirra CRM Admin interface. The left sidebar contains a navigation menu with categories: Home, Leads, Pipeline, Accounts, Contacts, Tasks, Ask Aiden, REVENUE (Quotes, Approvals, Orders, Products, Quotas & commission, Reports), MARKETING (Campaigns), CUSTOMERS (Service, Knowledge, Customer success, Finance & ERP), and a dropdown for SDC Solutions suite. The main content area is titled 'Admin' and shows a 'Roles & permissions' matrix for the 'Account Executive' role. The matrix lists various resources and the permissions (Create, Read, Update, Delete, Export) granted to the role, along with the row scope (Own or All).

Resource	Create	Read	Update	Delete	Export	Row scope
Accounts	☒	☒	☒	☐	☐	Own
Contacts	☒	☒	☒	☒	☐	Own
Deals	☒	☒	☒	☐	☐	Own

9. Observations, limitations and recommendations

- **No open defects.** All 22 review and test findings are fixed and covered by regression tests.
- **SSO and local 2FA:** users signing in through SSO rely on the identity provider's MFA; Cirra's own TOTP is not asked again. Recommended: enforce MFA at the IdP for SSO users.
- **Webhook delivery** can lag by up to five minutes for events whose transaction commits late (by design, to guarantee delivery).
- **Environment:** the test host went to sleep during an earlier run, freezing Docker; the final runs held the machine awake.
- **Recommended next:** CI pipeline running the four layers on every push; a cross-owner access test for every `/id` route; splitting the Celery beat scheduler into its own container; volume and load testing beyond demo scale.

10. Sign-off

Role	Name	Decision	Date
Test lead	Claude (AI test lead)	Recommend acceptance	27 Sep 2026
Product owner	Sid Choudhury
